

Data Performance Threshold

What is the suspicious data and how can we clean it?

Data Distribution: Histogram (ODOT)

Data Distribution: Histogram (WSDOT)

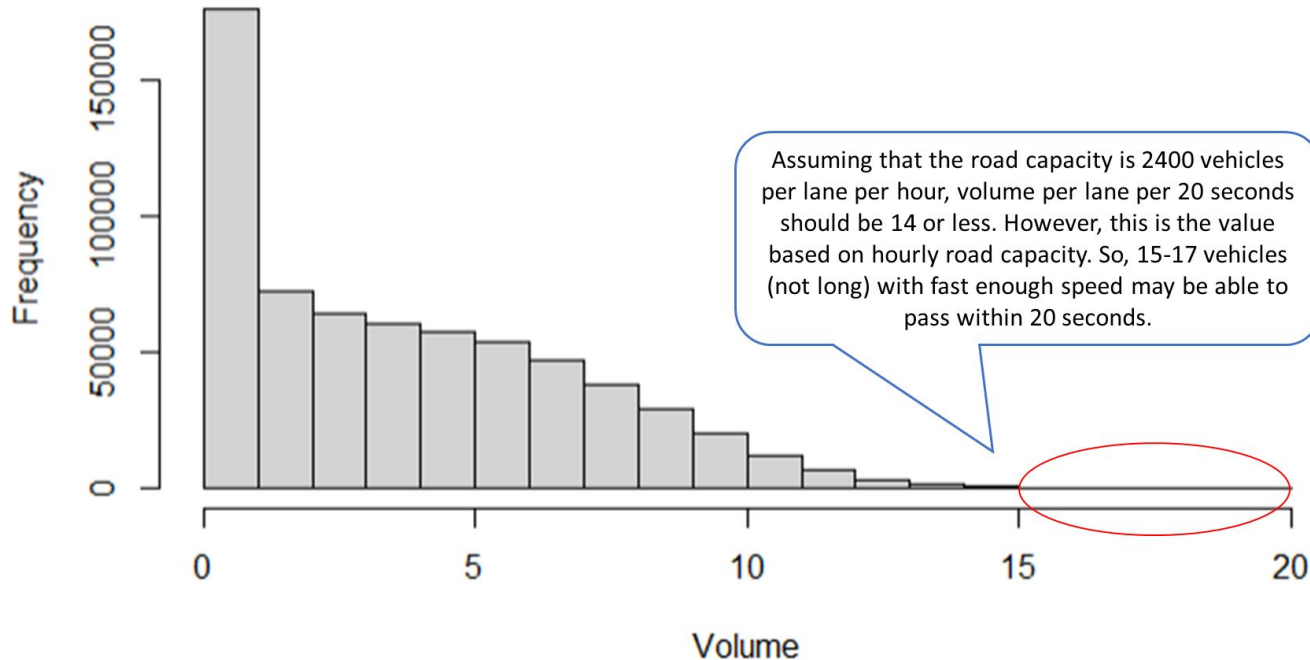

Thresholds for Outliers

- Sample Data
 - Based on ODOT & WSDOT data
 - On November 4-10
 - Detector type: Loop at one place (on three lanes), radar at other places
- Three Criteria
 - Volume: number of vehicle by lane within 20 seconds
 - Occupancy: time period the vehicles are detected within 20 seconds (%)
 - Speed: mile per hour

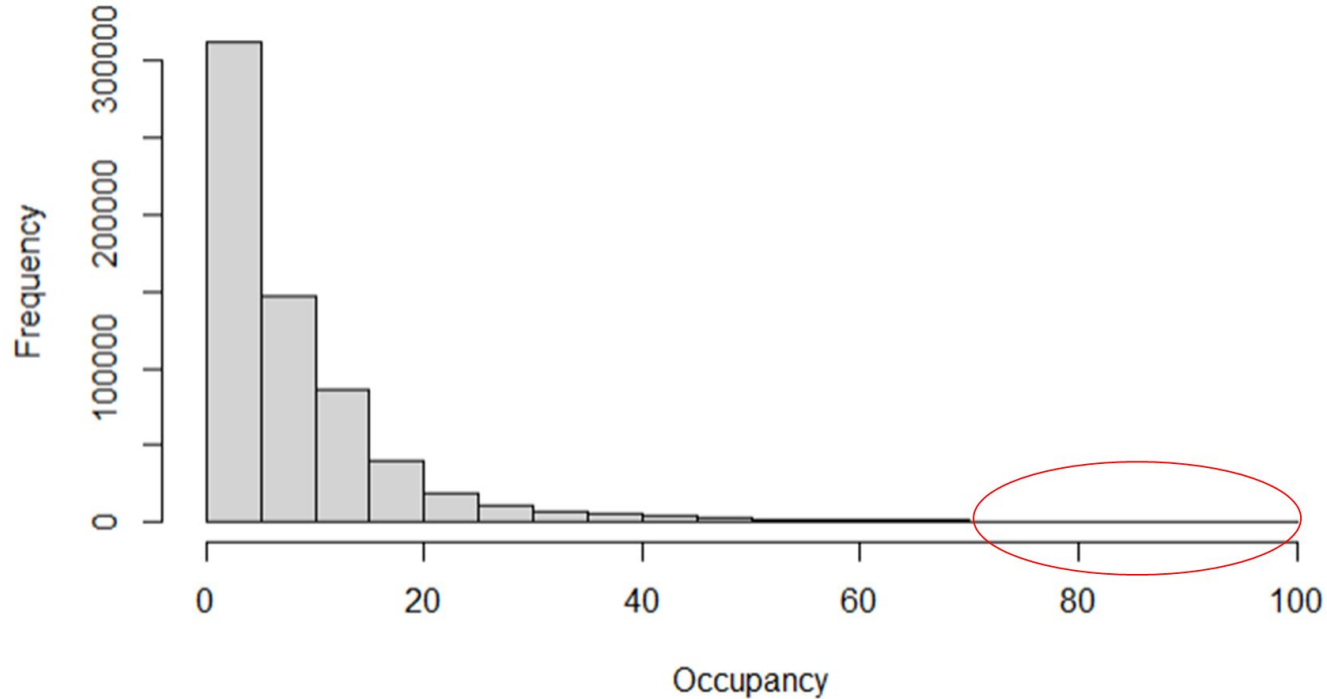

Data Distribution: Histogram (ALL) - Volume

Histogram of data\$volume

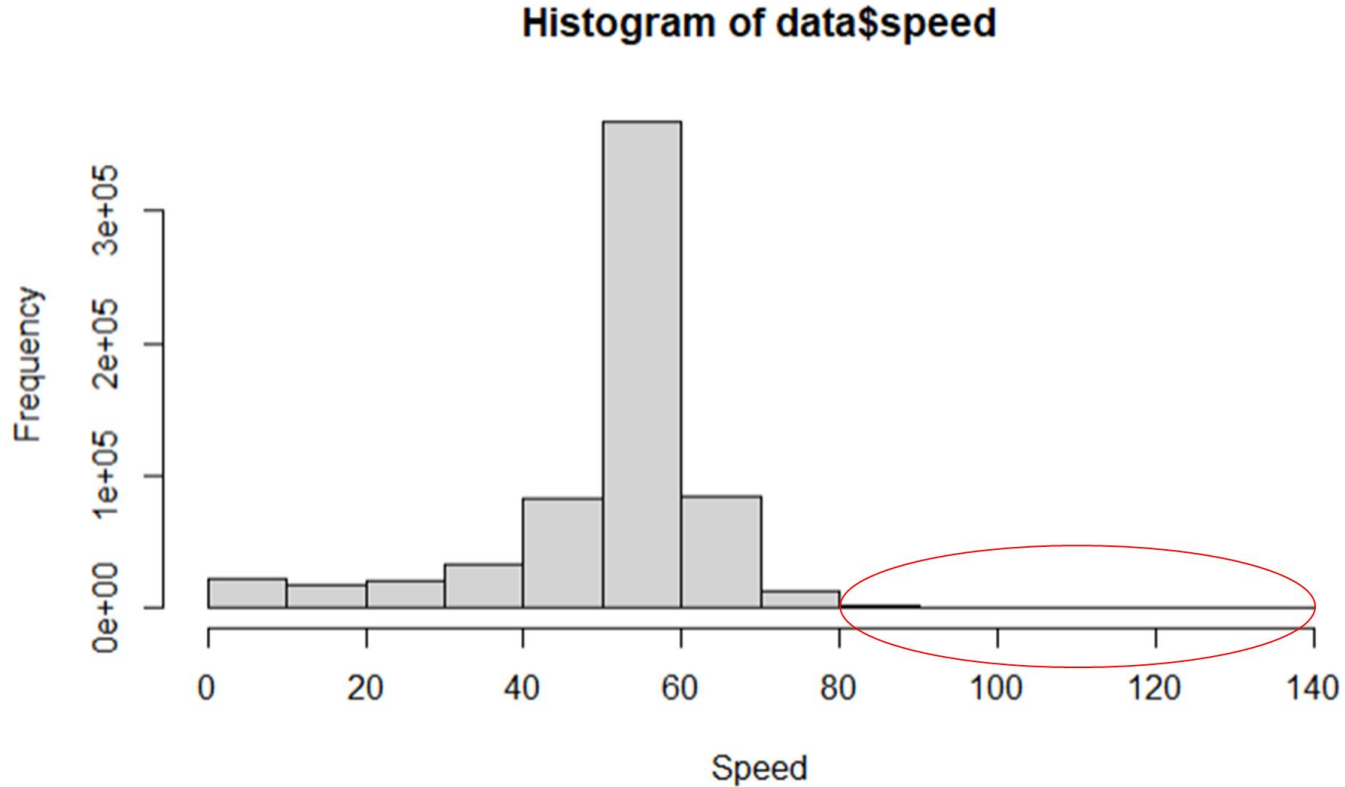

Data Distribution: Histogram (ALL) - Occupancy

Histogram of data\$occupancy

Data Distribution: Histogram (ALL) - Speed

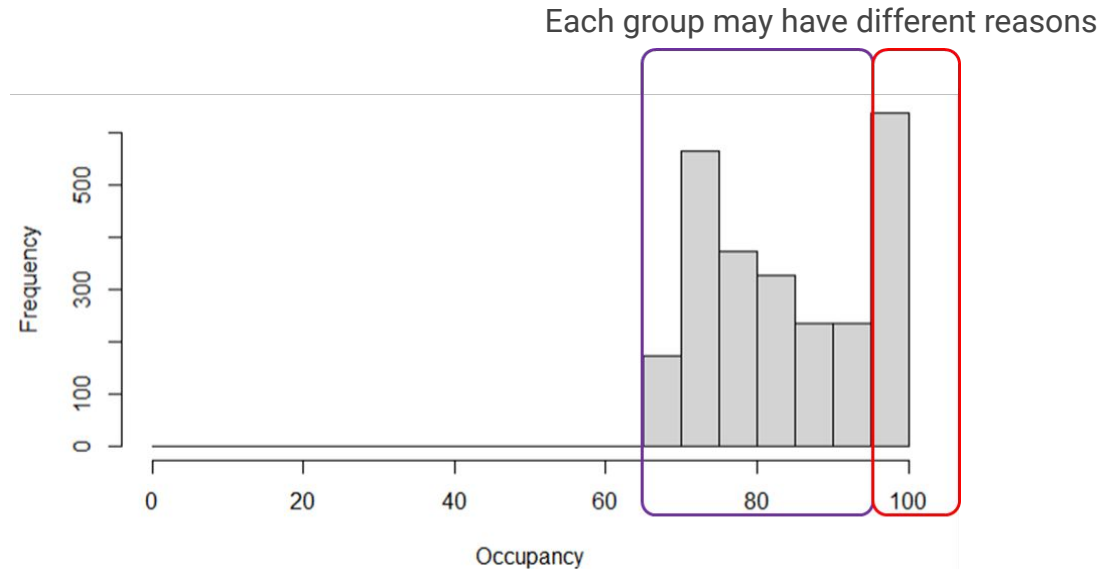

Approximately 6.7k, or 1% can be considered outliers, among the total 643k cases

BUT! Outliers do not necessarily mean measurement errors or machine malfunction, and non-outliers do not necessarily mean that they should be flagged as good.

More Details of Occupancy Outliers

- between 70-100, most cases in 70-75 & 99-100,
- especially 99-100 should be looked in more details (in other words, two groups occ 70-98 and occ 99-100 should be considered as separate situations)

More Details of Volume Outliers

- In outliers, most cases in 15-17,
- Even in outliers, over 17 cases are extremely high-volume cases (*fast enough speed AND high enough occupancy are required or measurement error*)

More Details of Speed Outliers

- Speed outliers are primarily between 80 mph and 100 mph
- Some cases have over 100 mph speed but very exceptional

When do outliers occur (outliers by hour)

Outlier (Occupancy ≥ 70 , 2544 cases)

- OCC outliers mostly happened in OR, at multiple locations on multiple days and hours
- But Some cases have high occupancy & low speed (congestion), but relatively high volume \rightarrow **Suspicious**
- Cases in WA at one location multi-lane (I-5, South, radar) on one day a week (Nov. 5th) 4 pm with low speed and low volume \rightarrow **Good**

| | starttime | detectorid | state | volume | occupancy | speed | date | hour | minute | detectortype | ramp | status | |
|---|---------------------|------------|-------|--------|-----------|-------|------|------|--------|--------------|---------|------------|------|
| 1 | 2024-11-05 23:26:40 | 102339 | OR | 10 | 74 | 10 | 5 | 23 | 26 | radar | no_ramp | suspicious | |
| 2 | 2024-11-06 23:33:40 | 102339 | OR | 11 | 73 | 10 | 6 | 23 | 33 | radar | no_ramp | suspicious | |
| 3 | 2024-11-08 23:25:00 | 102339 | OR | 10 | 81 | 10 | 8 | 23 | 25 | radar | no_ramp | suspicious | |
| 4 | 2024-11-06 00:36:20 | 102340 | OR | 12 | 74 | 9 | 6 | 0 | 36 | radar | no_ramp | suspicious | |
| 5 | 2024-11-06 00:46:40 | 102340 | OR | 10 | 70 | 8 | 6 | 0 | 46 | radar | no_ramp | suspicious | |
| 6 | 2024-11-04 15:46:20 | 100894 | OR | 3 | 82 | 10 | 4 | 15 | 46 | loop | no_ramp | Good | |
| 7 | 2024-11-04 16:04:20 | 100894 | OR | 4 | 74 | 9 | 4 | 4 | 16 | 4 | loop | no_ramp | Good |
| 8 | 2024-11-04 16:09:20 | 100894 | OR | 3 | 81 | 7 | 7 | 4 | 16 | 9 | loop | no_ramp | Good |

state
OR
WA

These cases are possible only when most vehicles are shorter than 15 feet (not bus or truck)

Outlier (Volume $\geq 15,898$ cases)

- Considering the number of sample cases (643k), volume outliers are rare (0.1%)
- In OR, they are highest between 1pm and 3pm at Sandy (2R079) to WB I-84 (loop); 82nd/Halsey (2R080) to WB I-84 (loop) → may be early rush hour
- In WA, volume outliers tend to increase in the late afternoon and decrease through the early morning hours especially between 8 pm and 1 am midnight (all days, multiple places, 270 cases among 513 WA volume outliers): occupancy (16% - 43%) speed (28mph - 71 mph)

These occupancy and speed ranges are acceptable, however, the time zone is questionable (suspicious)

Sandy (2R079) to WB I-84 (loop)

82nd/Halsey (2R080) to WB I-84 (loop)

Outlier (Volume ≥ 80 , 3323 cases)

- Speed outliers are mostly measured in OR during a week between 4am – 1pm
- More than 60% speed outliers are measured in OR (Sandy (2R079) to WB I-84, loop)
 - 82nd/Halsey (2R080) to WB I-84 (loop)
 - Russell (2DS150) @ NB&SB I-5 MP302.8 (radar)
 - Russell (2DS150) @ NB I-5 to I-405 MP302.8 (radar)

| | starttime | detectorid | state | volume | occupancy | speed | date | hour |
|---|---------------------|------------|-------|--------|-----------|-------|------|------|

| 2 | 2024-11-09 04:18:00 | 100694 | OR | 8 | 21 | 80 | 9 | 4 |
| 3 | 2024-11-05 13:50:00 | 100694 | OR | 10 | 20 | 81 | 5 | 13 |
| 4 | 2024-11-05 12:50:40 | 100694 | OR | 6 | 20 | 83 | 5 | 12 |

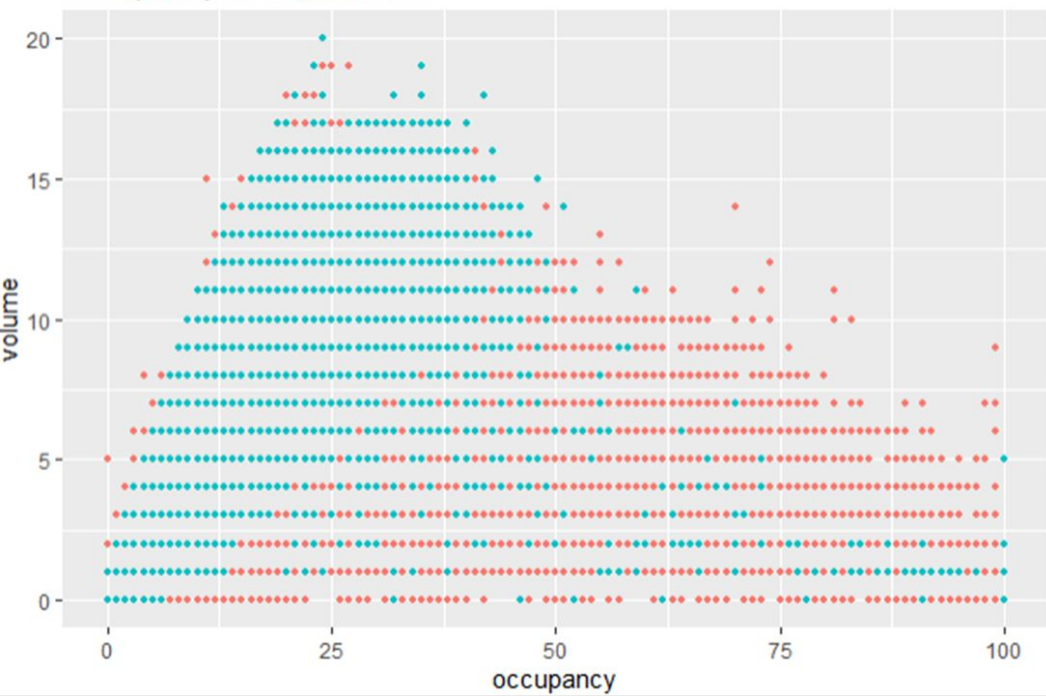

state

- OR
- WA

Considering the high speed and occupancy, the volume is not high enough (occ >50 means that vehicles should be detected for more than 10 seconds in 20 seconds). **BUT!** This is possible when long trucks like road train trucks pass.

Beyond the outliers
